## Configuring TCP/IP For External DSL Modems

These instructions are for configuring Windows to work with a DHCP server, such as a DSL Router/Modem/Firewall. Go to **Start – Settings – Control Panel – Network**, then select the TCP/IP entry for your network (Ethernet card) and click on the **Properties** button to bring up the following screens. You may be asked to insert your Windows CD or select the directory containing the Windows cabinet files, if you are asked, you **MUST** do this.

Once the configuration process is finished, you will be told to restart the computer, you **MUST**.
